Branch: Anudip, Pallavaram

Indian Tech Jobs Market Insights and Power BI Schema

23,201

postings on the canvas model; **6,944** employers, **6** role categories, **10** state values

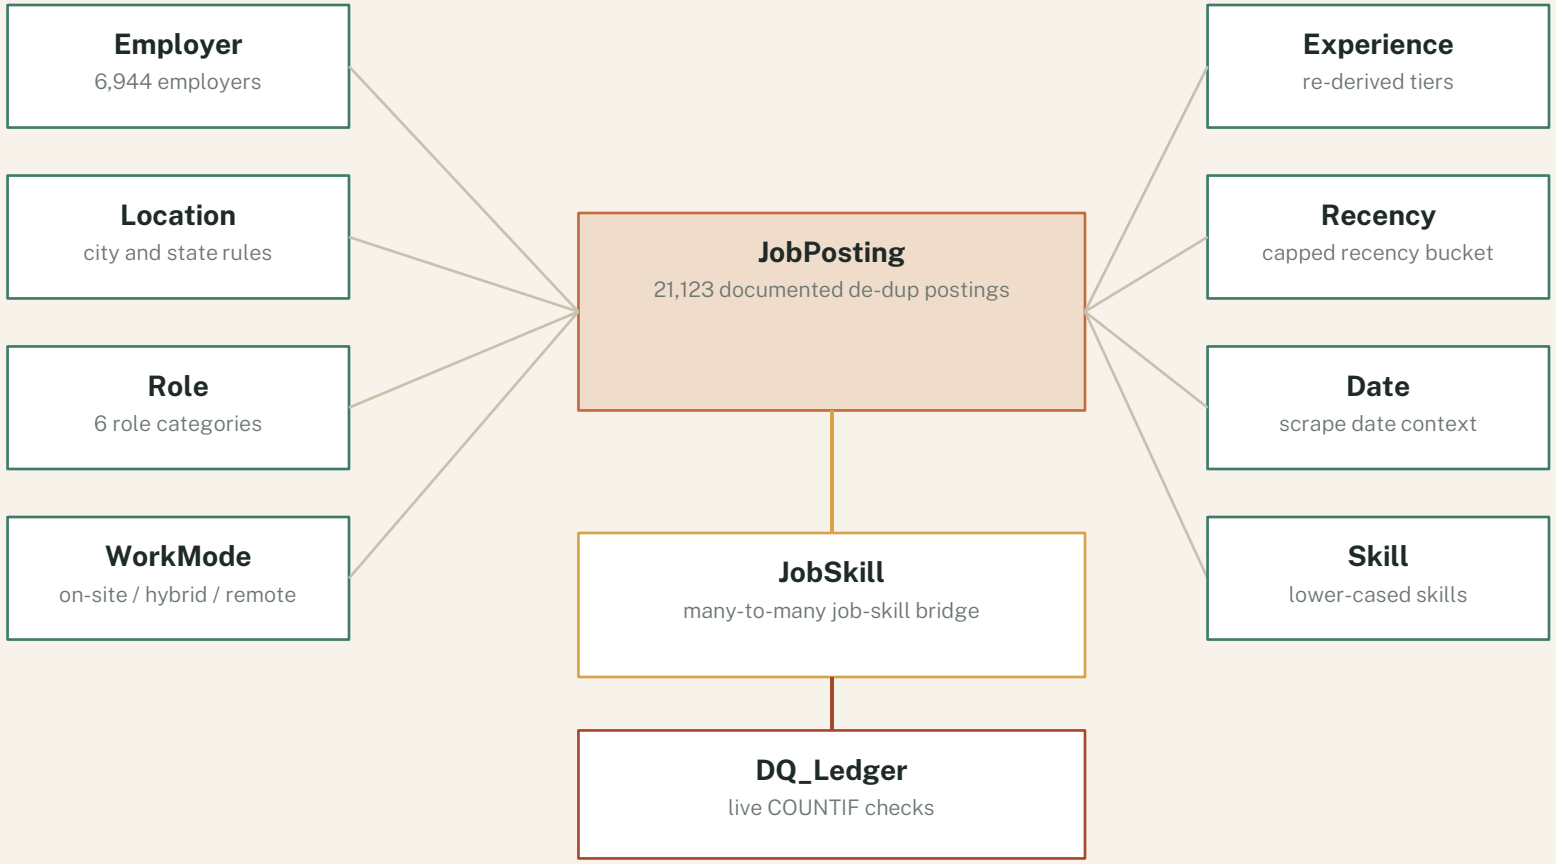

Basis: **23,201-row Power BI model** (what the canvas shows) unless marked "(de-dup)". Source: naukri.com scrape, **10 June 2025**.

[All pillars]

The cleaned layer is a star schema, but reconciliation still has a 52-row open item

CLEANED-LAYER DESIGN

VISUAL

Visual: star schema plus reconciliation bridge; fields: fact table, 8 dimensions, bridge table, DQ ledger, model rows, documented de-dup rows, open item.

Basis: **23,201-row Power BI model** (what the canvas shows) unless marked "(de-dup)". Source: naukri.com scrape, **10 June 2025**.

[Dashboard]

Page 1 leads with 23,201 jobs, but salary and fresher KPIs sit on narrow subsets

23,201
Total Jobs

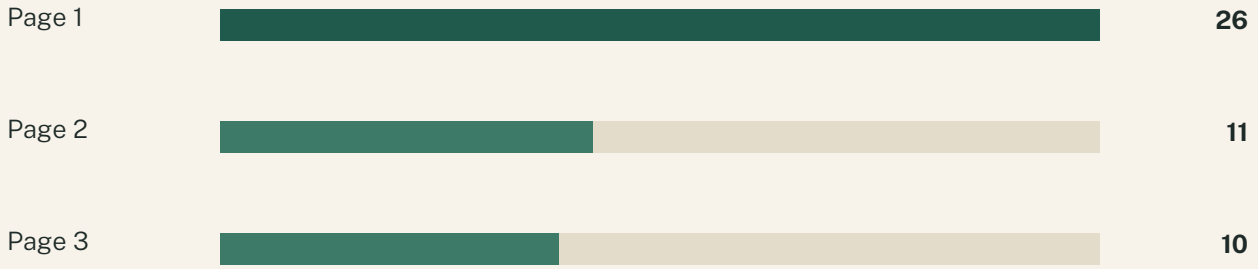

15.32 LPA
Avg Benchmark Salary

11.93%
Disclosed Salary Rate

18.03%
Fresher Friendly Ratio

- **Avg Benchmark Salary** is the mean midpoint on **2,768** disclosed salaries, not the full **23,201**-row canvas.
- **Disclosed Salary Rate** is **11.93%**, so salary KPIs describe a disclosed subset.
- **Fresher Friendly Ratio** is **18.03%** (**4,182** postings) as built on the canvas.
- A **30-cell** role-by-experience matrix plus donut, pie, funnel, bar, and line charts are carried.
- Slicers cover work mode, skill domain, salary tier, company size, and salary range.

DASHBOARD COMPOSITION

47 visuals across **3 pages**: **26 / 11 / 10**. Bookmarks: Insights, hide insights, Clear Filter.

Basis: **23,201-row Power BI model** (what the canvas shows) unless marked "(de-dup)". Source: naukri.com scrape, **10 June 2025**.

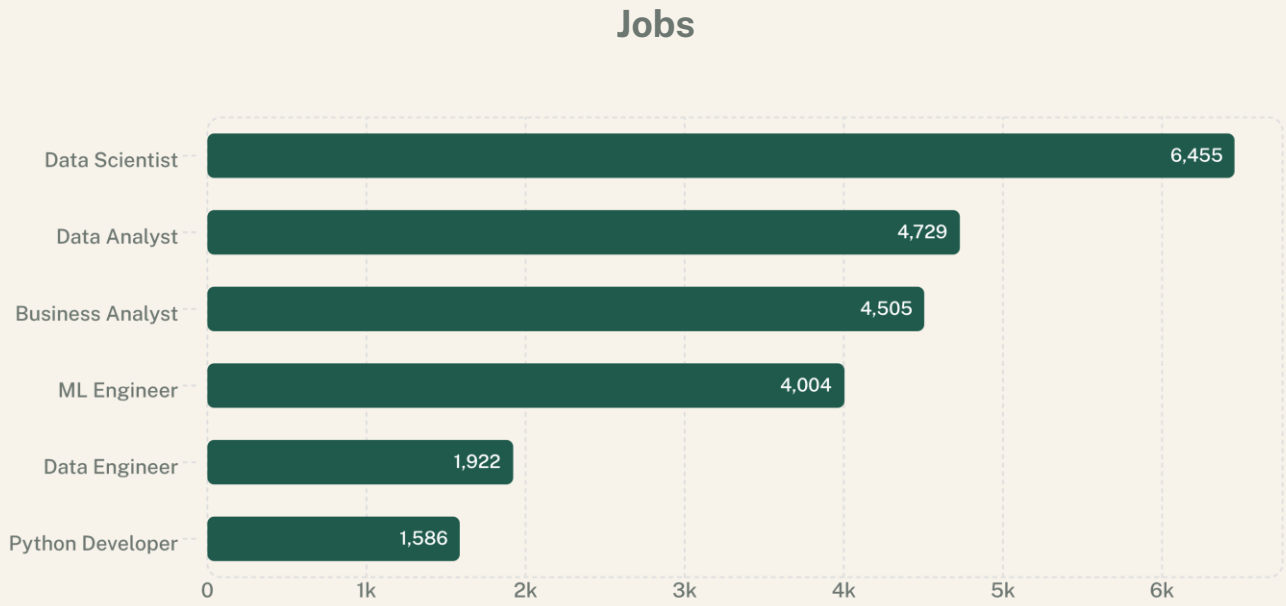

[Dashboard]

The largest matrix cell is Data Scientist × Mid: 3,074 jobs at 17.2 LPA

3,074 jobs

Data Scientist × Mid (3-5 Yrs), at **17.2 LPA**; Senior (6-8) is **1,547** jobs at **22.5 LPA**.

- **Metric Selector** is a field parameter switching **3 metrics**: Total Jobs, Avg Benchmark Salary (LPA), Fresher Friendly Ratio.
- The model has **8 DAX measures**, including Dominant Work Mode and High Rated Jobs = rating **4.0** to **<4.5**.
- Role demand: Data Scientist **6,455**; Data Analyst **4,729**; Business Analyst **4,505**; ML Engineer **4,004**; Data Engineer **1,922**; Python Developer **1,586**.
- Experience mix: Mid **43.6%**, Junior **21.2%**, Senior **20.7%**, Fresher **9.6%**, Lead/Architect **4.9%**.
- The full **30-cell** role-by-experience matrix is documented; unprinted cell values are **[not in source]**.

MATRIX HIGHLIGHTS

Data Scientist × Mid	Data Scientist × Senior	Data Analyst × Junior
3,074 jobs · **17.2** LPA	**1,547** jobs · **22.5** LPA	**1,432** jobs · **5.5** LPA

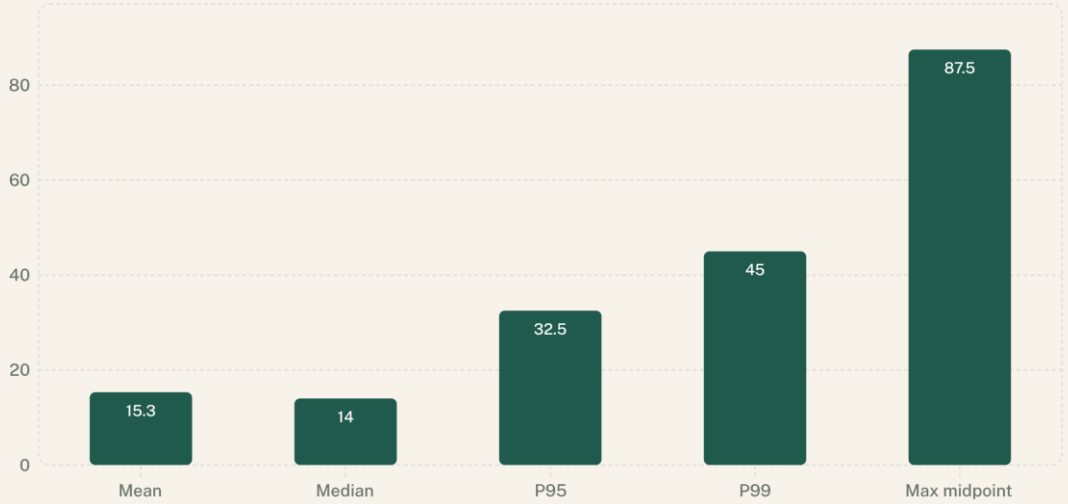

Visual: role bar plus matrix excerpt; fields: role, Total Jobs, experience tier, Avg Benchmark Salary, Metric Selector metrics, DAX measures.

Basis: **23,201-row Power BI model** (what the canvas shows) unless marked "(de-dup)". Source: naukri.com scrape, **10 June 2025**.

[Dashboard]

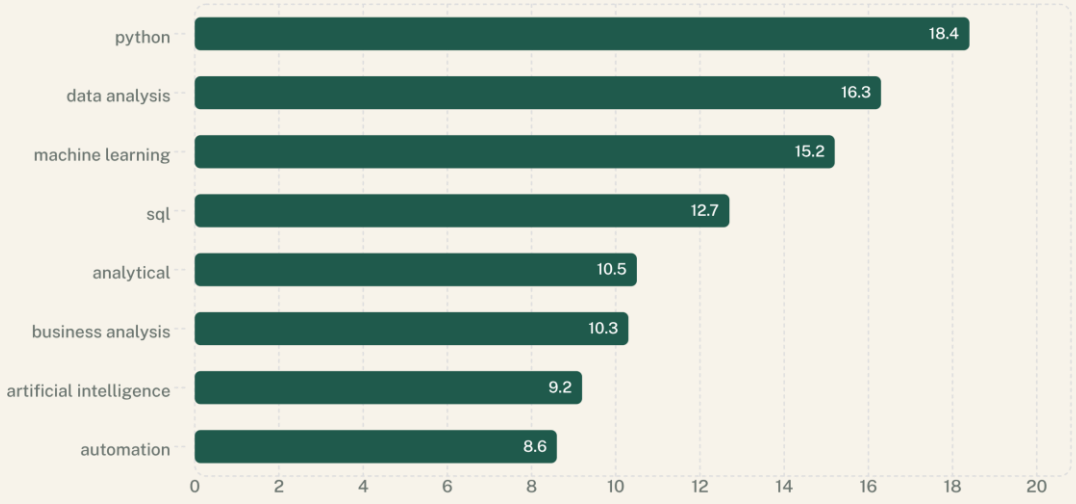

Only 11.93% disclose salary, and the disclosed subset is right-skewed

LPA

Salary basis: **n=2,768** disclosed rows (**11.93%**); mean range **11.60** to **19.04** LPA.

Share of postings

Skill domains: Business Intelligence **47.9%**, AI/ML/DL **28.4%**, Cloud and DevOps **10.1%**, Data Engineering **6.9%**, Data Science **6.7%**.

- Salary tiers: Senior 10-20 = **1,201**; Leadership 20+ = **463**; Junior 3-6 = **463**; Mid 6-10 = **329**; Entry <3 = **249**.
- Work-mode premium: Hybrid **21.01** versus Remote **14.49** versus On-site **13.21** LPA; work mode mix is On-site **80.6%**, Hybrid **10.1%**, Remote **9.3%**.
- Skills are **10,623** distinct; **547** postings (**2.4%**) are “Not Available”.

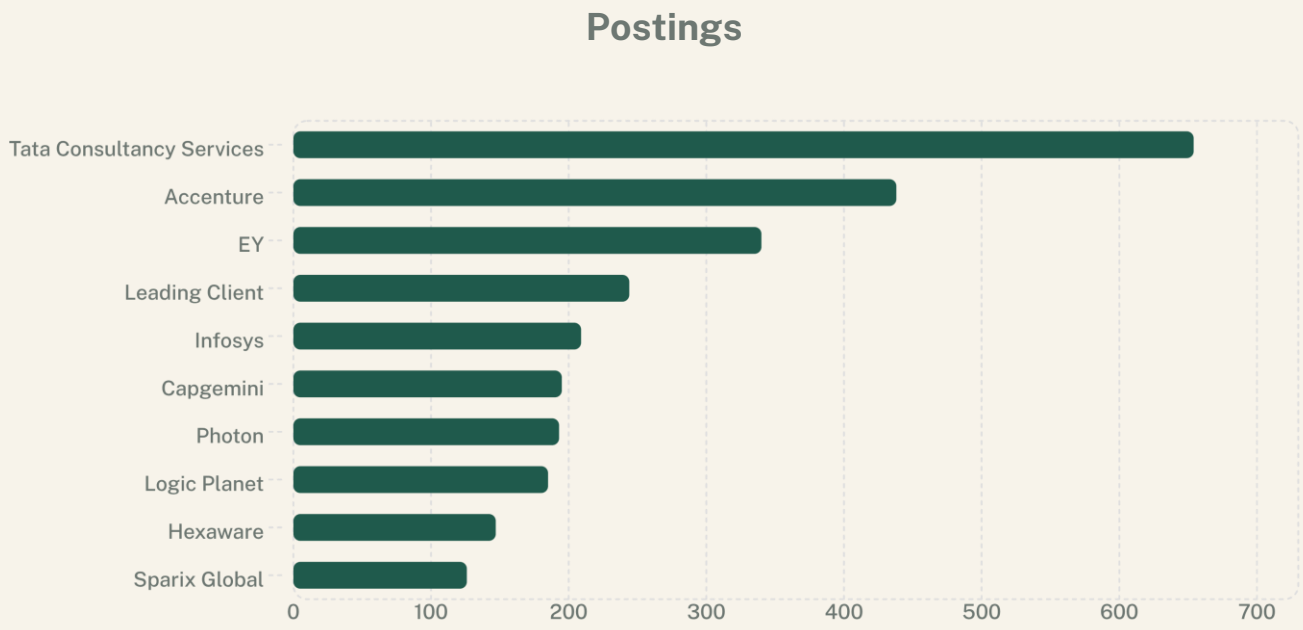

Visual: salary benchmark bars; fields: mean, median, P95, P99, max midpoint, disclosed n.

Basis: **23,201-row Power BI model** (what the canvas shows) unless marked “(de-dup)”. Source: naukri.com scrape, **10 June 2025**.

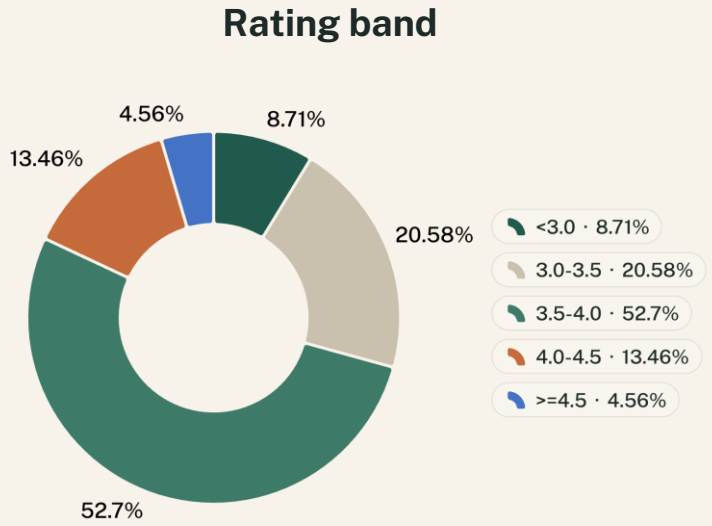

4,097 employers post exactly once, so employer concentration is a long-tail market

4,097 employers = 59.0%

post exactly once; they account for **17.7%** of postings. Top 10 hold **11.8%**; top 20 hold **15.9%**.

Visual: employer bar plus rating-band donut; fields: employer, postings, rating band, postings.

Median rating is **3.6**; **30.7%** of postings sit at exactly **3.6**.

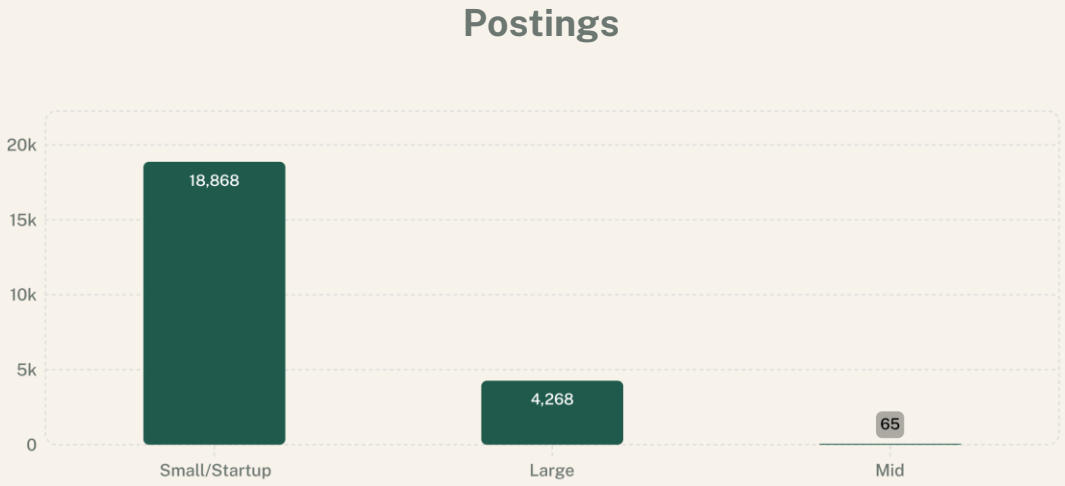

- Largest named employer: Tata Consultancy Services **654**; Accenture **438**; EY **340**.
- "Leading Client" appears as an employer with **244** postings.
- High Rated Jobs use rating **4.0** to **<4.5** in the model's DAX logic.

Basis: **23,201-row Power BI model** (what the canvas shows) unless marked "(de-dup)". Source: naukri.com scrape, **10 June 2025**.

18,868 postings sit in Small/Startup, a size bucket driven by heuristic rules

18,868 · 81.3%

are bucketed Small/Startup (<100). Large (1000+) is **4,268** (**18.4%**); Mid (100-999) is only **65** (**0.3%**).

Visual: hiring-tier bars plus anonymisation ledger; fields: size bucket, postings, generic-name scan counts.

ANONYMISATION SIGNALS

Leading Client	**244 postings**	1.05% · would rank #4
Keyword scan	**602 postings**	2.59% · 96 generic names
IsLikelyAnonymised	**name heuristic**	rule-based flag

- The keyword scan uses Leading Client, Client of, Confidential, MNC, and “Service based…”; present it as indicative, not the **IsLikelyAnonymised** rule.
- **A3:** EY (**340**), Photon (**193**), and Nagarro (**90**) are bucketed Small/Startup.
- **A6:** “Leading Client” still ranks **#4** as an employer.

Basis: **23,201-row Power BI model** (what the canvas shows) unless marked “(de-dup)”. Source: naukri.com scrape, **10 June 2025**.

[State Overview]

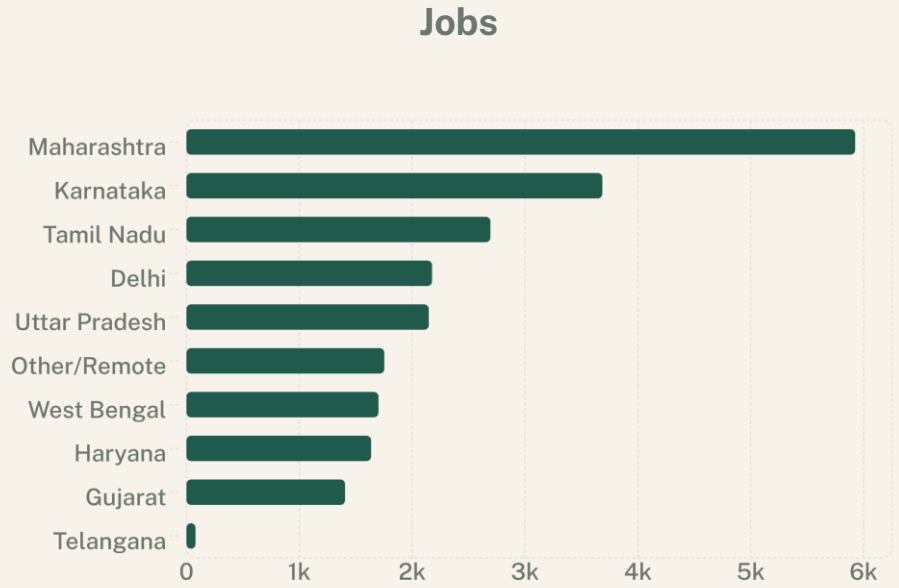

Maharashtra leads with 5,925 postings, but the map carries scrape-coverage gaps

5,925 · 25.5%

Maharashtra combines Mumbai **3,368** and Pune **2,557**; avg disclosed LPA is **16.17**.

State	Jobs	Share	Avg disclosed LPA
Maharashtra	5,925	25.5%	16.17
Karnataka	3,685	15.9%	17.62
Tamil Nadu	2,693	11.6%	16.58
Delhi	2,176	9.4%	15.95
Uttar Pradesh	2,147	9.3%	13.11
Other/Remote	1,753	7.6%	11.90 (n=63)
West Bengal	1,701	7.3%	11.17
Haryana	1,636	7.1%	16.51
Gujarat	1,405	6.1%	10.38
Telangana	80	0.3%	13.70 (n=10)

Visual: state table and shape-map proxy bars; fields: state, jobs, share, avg disclosed LPA, salary n flags.

- Salary leaders by avg disclosed LPA: Karnataka **17.62**, Tamil Nadu **16.58**, Maharashtra **16.17**.
- Low-base salary flags: Other/Remote **11.90** (**n=63**) and Telangana **13.70** (**n=10**).
- Telangana is represented by Hyderabad only **80** postings (**0.3%**).

Basis: **23,201-row Power BI model** (what the canvas shows) unless marked "(de-dup)". Source: naukri.com scrape, **10 June 2025**.

[State Overview]

2,830 postings change city after cleaning, and state mixes are not comparable

2,830 · 12.2%

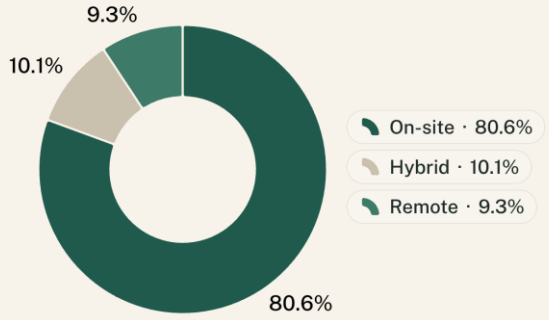

primary_city differs from scraped_city; **473** postings carry a primary_city outside the **11** scrape cities.

1,563 distinct raw location strings

27.8% multi-valued locations (6,455)

198 primary_city values vs 11 scrape cities

Work mode

Work mode share of postings; Hybrid premium appears on Slide 5.

State	Fresher	Hybrid	Disclosure
Gujarat	25.9%	4.3%	14.0%
West Bengal	23.7%	[not in source]	[not in source]
Uttar Pradesh	21.6%	[not in source]	[not in source]
Karnataka	12.3%	15.1%	[not in source]
Telangana	11.2%	[not in source]	[not in source]
Tamil Nadu	[not in source]	14.2%	14.1%
Other/Remote	[not in source]	[not in source]	3.6%

- Cleaning removes locality suffixes and standardizes names such as “Pune(Baner)”, “Mumbai Suburban”, Hubli, and Panipat.
- **A5: 49.1%** (**11,386**) sit in the capped “3+ weeks ago” bucket; **324** are future-start postings.
- State fresher, hybrid, and disclosure shares come from different cells in the source; blank cells are marked **[not in source]**.

Visual: city-cleaning ledger, work-mode donut, and state mix table; fields: raw strings, multi-valued share, primary_city, work mode, fresher share, hybrid share, disclosure share.

Basis: **23,201-row Power BI model** (what the canvas shows) unless marked “(de-dup)”. Source: naukri.com scrape, **10 June 2025**.

[All pillars]

Close the 52-row reconciliation and fix parsing before executive use

ANOMALY REGISTER

ID	Where it hits	Source fact
A1	Experience / fresher KPI	822 rows start at 10 yrs yet code min = 0; corrected FFR 14.46% vs 18.03%
A2	State overview	Hyderabad 80 vs Bangalore 3,685; Telangana salary n=10
A3	Company size	EY 340, Photon 193, Nagarro 90 bucketed Small/Startup; Mid has 65 rows
A4	Salary KPIs	Only n=2,768 disclosed (11.93%); mean 15.32 > median 14.0
A5	Recency	49.1% capped “3+ weeks ago”; 324 future-start postings
A6	Skills / employers	Skill lists capped at 8 for 89.8%; “Leading Client” ranks #4
A7	Integrity	63 rows salary-disclosed yet tiered “Undisclosed”; role_category mislabels exist

- Methodology ask for professors: document de-dup, parsing, salary derivation, and heuristics as model contracts.
- Executive ask for industry: use Total Jobs and role mix now; hold salary, fresher, geography, and size-tier decisions until A1-A5 are cleared.
- Next build gate: no executive export until the 52-row reconciliation and A1 parser fix are closed.

Basis: **23,201-row Power BI model** (what the canvas shows) unless marked “(de-dup)”. Source: naukri.com scrape, **10 June 2025**.
